3.0 INTRODUCTION

Java is an island in Indonesia, or you can say Java is type of coffee, but Java is most popular as a programming language. In 1991 Java Programming Language stepped into the world and got dominant status. In this unit you will learn the advantages and strength of Java, and what actually makes Java powerful and popular.

Broadly a Java program can be divided into two types, **Application and Applets**. The difference between the two are explained in this unit. The concept of Java Virtual Machine makes this language platform independent. With this concept of Java virtual machine we will move towards the programming of Java language. You can learn the basic programming concept of Java and how you can compile and execute the Java Application and Applet programs. To improve your programming concepts, you can move towards the declaration and initialization of different data types and variables. Similar to C, Java also contains operators. These are explained at the end of this unit.

3.1 OBJECTIVES

- After going through this unit, you should be able to:
- describe the strength of Java language;
  - explain Java virtual machine concept;
  - differentiate between Java applet and Java application;
  - write simple programs in Java;
  - compile and execute Java applets and application programs;
  - describe the data types in Java, and
  - declare and initialize variables in the programs.

3.2 INTRODUCTION TO JAVA

Java was developed by a team of computer professionals under the guidance of James Gosling at Sun Microsystems in 1991. They wanted to give a suitable name. Initially they called it "Oak" after seeing an oak tree from their window, but after some weeks they were discussing another name and were sipping Java coffee, so one of them suggested the name "Java". Other than this there is no interesting story/reason about its name Java. The only reason I can say is that its designers wanted to give a

|   |   |
|---|---|
| <i>absolute value of an int value</i>   | <pre>public static int abs(int x) {     if (x &lt; 0) return -x;     else return x; }</pre>   |
| <i>absolute value of a double value</i> | <pre>public static double abs(double x) {     if (x &lt; 0.0) return -x;     else return x; }</pre>   |
| <i>primality test</i>                   | <pre>public static boolean isPrime(int n) {     if (n &lt; 2) return false;     for (int i = 2; i &lt;= n/i; i++)         if (n % i == 0) return false;     return true; }</pre>  |
| <i>hypotenuse of a right triangle</i>   | <pre>public static double hypotenuse(double a, double b) { return Math.sqrt(a*a + b*b); }</pre>   |
| <i>harmonic number</i>                  | <pre>public static double harmonic(int n) {     double sum = 0.0;     for (int i = 1; i &lt;= n; i++)         sum += 1.0 / i;     return sum; }</pre>   |
| <i>uniform random integer in [0, n)</i> | <pre>public static int uniform(int n) { return (int) (Math.random() * n); }</pre>   |
| <i>draw a triangle</i>                  | <pre>public static void drawTriangle(double x0, double y0,                                double x1, double y1,                                double x2, double y2 ) {     StdDraw.line(x0, y0, x1, y1);     StdDraw.line(x1, y1, x2, y2);     StdDraw.line(x2, y2, x0, y0); }</pre> |
